

Post-Incident Information Acquisition

Hands-On Workshop

Many companies invest heavily in cause & effect analysis tools and training, yet few provide their employees training in on-scene evidence gathering and data acquisition, the foundation upon which the analysis phase of the investigation depends. This highly interactive workshop bridges that gap with extensive use of case studies and role-play exercises.

Objectives:

- Enable employees to collect comprehensive and high-fidelity information post-incident
- Provide a basis for filtering data / evidence gathered to focus on verifiable data
- Utilize the Data Quality Ladder quality assurance tool
- Share best practices in conducting witness interviews

Solve all types of work problems more effectively, including HSE issues

Who Should Attend?

Personnel at all levels of the organization will benefit from this training including:

- Front-line personnel likely to be on location when an unplanned event occurs
- Line Management, Supervisors, and HSEQ personnel
- Anyone who reports or investigates unplanned events (such as Incidents and Near Misses)
