# *Simple Incident Analytics*

Hands-On Workshop

Many companies require sophisticated cause and effect analysis tools be applied post-incident. As useful as they are for complex events, they are resource intensive and not appropriate for every incident, especially those which involve human performance factors. This highly interactive workshop delivers extremely fast, resource efficient, and verifiably effective alternative analytical methods.

Objectives:

- **Teach the use of the simple yet powerful 2Box and HPA (Human Performance Analysis) analytical tools**
- **Provide a basis for focusing investigative efforts on what went wrong versus the consequences**
- **Share a decision framework to concentrate efforts on significant and potentially significant events**

Solve all types of work problems more effectively, including HSE issues

Who Should Attend?

Personnel at all levels of the organization will benefit from this training including:
- **Line Management, Supervisors, and HSEQ personnel**
- **Anyone who reports or investigates unplanned events (such as Incidents and Near Misses)**
- **Anyone who develops or implements corrective actions**
