Advanced vPSI Methods: KUBO-TEPA™ Problem Investigation & Correction

Objective

On completion of this one-day training course, participants will be able to:

- Significantly reduce the average time spent in investigating Accidents, Incidents, Near Misses or other problems / unplanned events
- Quickly produce effective corrective actions that maximize the probability of long-term performance improvement
- Express unsafe conditions and conventional causes in terms of acts of people
- Extend and enhance conventional cause / effect analysis techniques to generate corrective actions that address underlying behaviors
- Reduce costs by eliminating action items that are not real corrective actions
- Facilitate investigations to assist and streamline the process.

Who Should Attend

Line management and staff personnel who may have a role in the investigation of Accidents, Incidents, Near Misses or other problems / unplanned events. Personnel who are involved in developing or implementing corrective actions. Staff people, such as specialists in HSE, regulatory compliance, quality, human resources, and contracts would also find this course very useful.

Prerequisite

Participants must complete the “Fundamentals of vPSI: Applying vPSI Methods of Problem Solving & Accident Prevention” training course before training in Advanced vPSI Methods.

Customization

This course can be customized with clients’ own material for in-house training. In addition, this class can be combined with the Advanced vPSI Methods: KUBO-TEPA™ Problem Solving Process workshop.

Cost

Maximum 12 trainees per class. Cost is based on the number of attendees.
